INTRODUCTION

Release note is a document that comprises of various areas, New Processes, New Features, Process and Feature Enhancements, UX/UI Enhancements, Performance Enhancements, Security Enhancements and Bug/Issues Fixes, for the end users of the organization.

SCOPE

This release ver.7.3.15, is an update/improvement of the previous eFile release version 7.3.14. The changes are based on the feedbacks, suggestion and change requests received from various users of different ministries and departments. It also includes few fixes for the issues faced by users in the previous version.

PURPOSE

This is a release document for eFile version 7.3.15; containing following new processes and feature:

PROCESS AND FEATURE ENHANCEMENTS (IMPROVEMENTS)			
S. NO.	MODULE/ SUB MODULE	FEATURE SUMMARY	DESCRIPTION
1.	eFile	Addition of Secondary Mobile Number for Notifications	An option to provide an alternate (secondary) mobile number alongside the primary mobile number has been introduced. This enhancement ensures that all notifications pertaining to files, receipts, and dispatches within the application are reliably delivered to both numbers without interruption. Furthermore, this feature is configurable, allowing users to choose whether notifications are sent exclusively to the primary number or to both the primary and secondary number.
2.	eFile/File	Improved User Guidance for Editing Drafts Uploaded via 'Upload' Option	The user experience for editing drafts created through the 'Upload' option has been enhanced to provide clearer guidance. Users are now informed that the uploaded draft can be edited by downloading the draft, making the necessary changes offline, and then re-uploading the updated document.
3.	eFile/File Review	Status Monitoring List in File Review Module	A 'Status Monitoring' list has been added under the File → Review module, enabling users to track files within their section hierarchy that are pending review. The list categorizes files by status—All, Due Today, and Due Date Elapsed—and offers filters based on dealing section, file heads, subject, and more for efficient monitoring.
4.	eFile/Dashboard	New Section Added to eFile Dashboard: File Review Alerts for Section Hierarchy	A new section has been introduced on the eFile dashboard to display alerts and notifications for file reviews that are due today or have elapsed, based on the user's section hierarchy. This enhancement helps users stay informed and take

			timely action on pending reviews.
5.	eFile/File	Transfer of Received Letters	The transfer of the ' Received Letters ' is now provisioned. The user with the application's administrator role can transfer them from one user to another using ' TRANSFER ' module.
6.	eFile/File	Task Assignment for Diarization of Received Letters	Users can now assign the diarization task of Received Letters to another user within the same section/office or in its hierarchical chain, enabling better task delegation.
7.	eFile/File	Enhancement in Bhashini Integration	The application has already integrated the 'Speech-to-Text' and 'Translation' services in multiple languages through the external platform 'Bhashini'. These services have been implemented as a generic feature within the application. To further enhance user convenience, this functionality is now also made available specifically on the Note Creation and Draft Creation pages. This enables users to efficiently create notes and drafts using voice input and language translation, streamlining the noting/drafting process.
8.	eFile/Settings	Modifications to the Application Registration process for API Consumption	All departmental applications currently registered to consume the Receipt Creation API are required to undergo re-registration. This re-registration is mandatory to ensure continued access and uninterrupted usage of the Receipt Creation API services.
9.	eFile/Dispatch	User Search for Inter eOffice and other dispatches now supports department-level filtering, replacing the previous instance-wide search.	A provision has been introduced to enable user search within a specific department of the instance for Inter eOffice and other application dispatches, allowing for more efficient and specific user selection. Previously, the search was conducted across all users in the entire instance without a department-level filter. This enhancement is intended to improve usability and streamline the dispatch process.

10.	Web Service	Modifications to the Dispatch PDF web service	The Dispatch PDF web service has been discontinued as a standalone component within the Web Service application. Henceforth, it will be incorporated into the main eFile application. All related operations and support will be managed exclusively through the eFile platform. Relevant teams are advised to update their processes and integrations accordingly.
